CUSTOMER JOURNEY MAP

Project Name: EduGenie

Technology: Google Gemini Generative AI

Project Type: AI-Powered Learning Assistant

1. INTRODUCTION

The Customer Journey Map describes the different stages a student goes through while using EduGenie. It helps identify the student's actions, needs, expectations and possible difficulties at each stage of interaction with the system.

2. CUSTOMER JOURNEY

STAGE 1: AWARENESS

Student Action:

The student realizes that reading and summarizing lengthy educational material takes too much time.

Student Need:

The student needs a simple tool that can help with learning and revision.

Student Expectation:

The student expects an easy-to-use AI learning assistant.

Possible Challenge:

The student may not know which AI tool is suitable for educational purposes.

STAGE 2: ACCESSING EDUGENIE

Student Action:

The student opens the EduGenie application.

Student Need:

The student wants to access the learning assistant quickly.

Student Expectation:

The application should have a simple and understandable interface.

Possible Challenge:

A complicated interface may make it difficult for a new user to understand how to use the system.

STAGE 3: ENTERING STUDY MATERIAL

Student Action:

The student enters or provides educational content that needs to be understood or summarized.

Student Need:

The student wants to provide the study material easily.

Student Expectation:

The system should accept the required educational input without unnecessary complexity.

Possible Challenge:

Very long or unclear input may affect the usefulness of the generated response.

STAGE 4: AI PROCESSING

Student Action:

The student waits while EduGenie processes the provided content using Google Gemini.

System Action:

EduGenie sends the relevant input to the Gemini model and receives an AI-generated response.

Student Need:

The student expects the system to process the content efficiently.

Student Expectation:

The generated response should be relevant to the provided educational material.

Possible Challenge:

Internet connectivity, API availability or processing issues may affect the response.

STAGE 5: RECEIVING THE RESULT

Student Action:

The student reads the generated summary or response.

Student Need:

The student wants clear and concise educational information.

Student Expectation:

The response should be understandable and contain the important information from the input.

Possible Challenge:

The student may need additional explanation if the generated response is not sufficiently clear.

STAGE 6: LEARNING AND REVISION

Student Action:

The student uses the generated content for understanding and revision.

Student Need:

The student wants to save time and improve learning efficiency.

Student Expectation:

The generated content should be useful for quick revision.

Possible Challenge:

The student may need additional features such as question answering, quizzes or personalized learning support.

4. USER EXPERIENCE GOAL

The main goal of the EduGenie customer journey is to provide students with a simple and efficient path from educational content to useful AI-assisted learning material.

5. CONCLUSION

The Customer Journey Map helps identify the complete interaction between the student and EduGenie. By understanding the student's needs and challenges at each stage, the system can be designed to provide a simple, clear and useful learning experience.
